

We Claim:

1. A remote control, comprising:
a support and a contact of the remote control;
a support rail and a contact rail of a technical device, said support and said contact being fashioned such that at least one of an optical and electrical effective connection is automatically produced between said contact and said contact rail via attachment of said remote control to said support rail.
2. A remote control according to claim 1, wherein the effective connection is an electrically conductive contact.
3. A remote control according to claims 1, wherein the effective connection is an inductive connection.
4. A remote control according to claims 1, wherein the effective connection is an optical connection.
5. A remote control according to claims 1, wherein the remote control is supplied with an electrical voltage via the effective connection.
6. A remote control according to claim 5, further comprising:
a charging module connected with said contact; and
an accumulator module connected with said charging module.
7. A technical device and a remote control, comprising:
a support rail and a contact rail of a technical device;
a support and a contact of said remote control adapted to connect to said support rail and said contact rail;
said support rail and said contact rail being fashioned such that at least one of an optical and electrical effective connection is automatically produced between said contact and said contact rail via attachment of said remote control to said support rail.

8. A technical device according to claim 7, wherein the effective connection is an electrically conductive contact.

9. A technical device according to claim 7, wherein the effective connection is an inductive connection.

10. A technical device according to claim 7, wherein the effective connection is an optical connection.

11. A technical device according to claim 7, wherein an electrical supply voltage is made available via the effective connection.

12. A technical device according to claim 11, wherein the contact rail is connected with a low-voltage supply.

13. A technical device according to claim 7, wherein said technical device is a medical-technical device.

14. A technical device according to claim 13, wherein said medical or technical device is a patient positioning table.
